Distributed Systems, Business Logic Analysis, SaaS B2B/B2C Experience, Backend Services & DB Integration, VMs & Containers

### Backend

APIs, Websockets, Protocol Buffers, Database ERD & Schema Design, Location Services, Server Routing & Middleware

## INTERESTS

### Infrastructure

Provisioning, Configuration, Monitoring, Logging, Proxies, Service Mesh, Container Orchestration, NGINX, Apache

## VOLUNTEER EXPERIENCE

**Trip Cove** (30.04.2021 - Backend 30.09.2021)

Traineeship

Trip Cove, a location and travel based SaaS startup - was a great learning experience and a natural fit for my interests. It was a creative business model and environment. As the first hire of this start up, I worked with two different dev teams over the 5 months working and training at Trip Cove. My time was well spent here and I seriously enjoyed working with each team.

## ENGAGE DIGITALS

## CURRENTLY WORKING WITH

**Common Tools :**

SQL, Node, Express, Javascript, PHP, HTML, CSS, React

## HISTORY

**Public Sector Engagement** (24.09.2017 - Present)

Minister of States Office & DFID

An international aid financing & logistics solution I have been working on somehow got the attention of the Minister of States Office in 2017 which prompted my correspondence with DFID to arrange a meeting to propose these ideas. On travelling to London I received extremely positive feedback on my thorough planning and was advised to return for another meeting regarding this work in the future. I am happy to provide references or further details of the application design and various derived solutions.
